

What happens when you combine technology with travel? Sabre! Did you know that cutting-edge technology is used at Sabre by more than 1 billion people around the globe? Did you know that Sabre processes approximately 85,000 transactions per second for the largest industry in the world - travel and tourism? Now, that we have your attention, Sabre is an innovative technology company that leads the travel industry by helping our customers (and employees) succeed. We are looking for forward-thinking, creative people who take ownership of results and make things happen. If this sounds like you, consider joining our team.

Team Introduction:

Flight Plan Manager team develops a comprehensive flight planning solution for the market. This is a mission critical product for Sabre airline business due to its superior cost optimization capabilities. FPM combines complete data support services — notice to airmen (NOTAMS), weather, airport suitability and airspace restrictions — with real-time alerts. The 4-D cost optimization functionality, route, altitude, speed and time are simultaneously analyzed to create an optimal flight path that accounts for fuel costs, CO2 emissions and delays. The solution is used by 30+ airlines including such big players as United Airlines or Turkish Airlines and the customer base is growing each year.

Working in the FPM team will challenge you and help you develop your business, technical and interpersonal skills. You will have an opportunity to cooperate with young, committed team. The QA team ensures high quality customer experience through systematic application of agile testing practices.

Software Developer in Test (Location: Vienna)

DUTIES/RESPONSIBILITIES:

- Participating in a full agile development life cycle, working closely with marketing, delivery and development teams
- Designing, creating, executing and maintaining automated tests and manual tests
- Troubleshooting and isolating issues, finding defects and working with developers to resolve them
